Education

Netaji Subhas University of Technology

B.Tech in Electronics and Communication Engineering

7.8 CGPA

Experience

Luxasia Group

Jan 2026 – Present

Full Stack Engineer Intern (Data Science Team)

Gurugram, India

- Developed and shipped a **billing automation tool** which reduced billing processing time by **99%**, transforming a multi-day financial manual billing and reconciliation effort into a standardized **10-minute workflow**.
- Led to reduction in billing problems caused by human error, standardisation and allowed people to observe billing metrics for **80+** brands across 7 countries.
- Developed a creative analytics engine by integrating **GPT-5.4 Vision** with FastAPI to programmatically classify ad creatives across dimensions like hook type, visual style, and messaging angle.
- Engineered a pipeline to extract and inject **Meta Ads** marketing data using OpenCV and Pillow to extract representative frames from video and GIF creative assets for AI analysis.
- Empowered creative teams to transition from subjective design to data-driven optimization, providing actionable insights into which specific creative decisions maximize marketing results across **impressions, CTR, and CPC**.

DSN Legal ([dsnLegal.com](https://dsnlegal.com))

May 2025 – July 2025

Full Stack Developer Intern

New Delhi, India

- Modernized the firm's digital presence by spearheading a complete frontend migration from static HTML/CSS to **React.js**, resulting in a **40% improvement** in page load speeds and enhanced mobile responsiveness.
- Engineered a dynamic **Court Fee Calculator** using **PHP** and **MySQL**, automating complex fee computations based on state jurisdiction and case valuation.
- Optimized database queries for the fee calculation logic, ensuring near-instantaneous results for large datasets and reducing manual calculation errors.
- Collaborated with legal professionals to define UI requirements, designing a clean, accessible interface that improved internal workflow efficiency.

Projects

Agentic Retrieval-Augmented Generation System | *Python, LangChain, FAISS, SentenceTransformers, LLMs* (GitHub)

- Built an end-to-end **Retrieval-Augmented Generation (RAG)** system enabling semantic search and contextual Q&A over unstructured data.
- Implemented a **multi-format document ingestion pipeline** supporting **PDF, TXT, CSV, Excel, Word, and JSON** using LangChain loaders.
- Generated dense embeddings using **SentenceTransformers** and indexed them in a **FAISS vector database** with persistence and metadata tracking.
- Designed a **top-K similarity retrieval** and prompt-grounded LLM workflow to minimize hallucinations and improve answer relevance.
- Architected a **modular and scalable pipeline** separating ingestion, embedding, retrieval, and generation for extensibility and performance.

Subscription Tracker | *Express.js, MongoDB, JWT, Arcjet* (GitHub)

- Developed a complete backend subscription management system enabling users to create, view, and cancel subscriptions.
- Implemented **JWT-based authentication** and **rate limiting using Arcjet** (token bucket algorithm) for API protection.
- Designed modular RESTful APIs in Express.js with robust schema validation and error handling.

16-bit Virtual Machine | *C++* (GitHub)

- Developed a custom **16-bit VM** supporting instruction decoding, stack operations, and memory management.
- Implemented assembler, instruction set, and opcode handling for arithmetic and branching instructions.

Technical Skills & Certificates

Technologies/Frameworks: C++, Python, FastAPI, React.js, Node.js, Express, PHP, MySQL, MongoDB, Tailwind CSS, Azure (Container Apps, Blob Storage)

ML & Computer Vision: GPT-5.4 Vision, OpenCV, LangChain, SentenceTransformers, NumPy, scikit-learn, Pillow

Developer Tools: Git, VS Code, Postman, Linux, CI/CD, SQL Server (pyodbc)

Certificates: HackerRank REST API, HackerRank SQL
